<b>SUMMARY OF DUTIES:</b>			
Serves as a technical expert and focal point for the installation and configuration of hardware and software on computers and data associated with assigned systems. Develops, modifies, and tests overall system backup and recovery strategies for assigned systems. Serves as a systems administrator responsible for planning, coordinating, modifying, implementing, and troubleshooting in order to meet customer needs to include the administration of all systems pertaining to associated hardware platforms, software applications and numerous interfaces included in the Local Area Network (LAN). Determines equipment and communications requirements and interfaces with other systems. Evaluates machine usage and develops plans for the necessary acquisition to support future hardware and software requirements. Analyzes, evaluates, and recommends hardware/software changes to various computer systems. Considers factors			

such as compatibility with standard systems, conversion or implementation costs, and impact on existing equipment. Installs, configures and tests products and equipment being reviewed. Develops guidelines and standard operating procedures (SOPs), regarding the operation/use of assigned C4 systems, services, and activities. Analyzes policies, regulations, and system provisions governing standard operating systems and provides advisory services to users. Implements systems software changes, operating system releases and maintains the operational status of systems. Coordinates with system developers resolving hardware and/or software malfunctions. Additional responsibilities include the configuring and daily operation of Cryptographic equipment and Quality Assurance responsibilities. Performs other duties as assigned.
