# LETTER FROM THE STATEWIDE INTEROPERABILITY COORDINATOR

Greetings,

As Washington's first full-time, dedicated Statewide Interoperability Coordinator (SWIC), I am excited to present the 2023 midterm update to our Statewide Communication Interoperability Plan (SCIP). This update marks an important milestone in our state's ongoing efforts to enhance emergency communications interoperability, ensuring seamless, resilient, and secure communications for public safety and emergency response teams across Washington.

This update not only meets the U.S. Department of Homeland Security grant guidelines but also fulfills the State Interoperability Executive Committee's (SIEC) mandate under RCW 38.52.595. Building on the great work that has come before me, I am honored to continue driving this mission forward. Representatives from the SIEC, the Staff Advisory Workgroup (SAW), and a broad coalition of statewide partners—including public safety, emergency management, cybersecurity, and emergency communications cooperators—have collaborated to strengthen the SCIP framework with measurable and actionable goals.

As part of this update, we have aligned with the State Interoperability Markers Assessment, which allows us to benchmark our progress and move our state "to the right" on the interoperability scale. With the help of all cooperators throughout Washington, I look forward to continuing our efforts to expand governance, adopt new technologies, and enhance cybersecurity. Together, we will tackle critical priorities like improving land mobile radio (LMR) interoperability, expanding Next Generation 911 (NG911) capabilities, and strengthening our cybersecurity infrastructure to ensure that our communication systems are prepared for future challenges.

I am enthusiastic about this opportunity to work closely with all stakeholders across the state to implement the goals set forth in the SCIP. By fostering collaboration and leveraging our collective expertise, we will achieve our shared vision of "Seamless, interoperable, and resilient communications," making Washington a national leader in public safety communications.

Thank you for your continued support and dedication to this vital mission.

Sincerely,

Jon Lee

Washington Statewide Interoperability Coordinator

#### INTRODUCTION

The SCIP is a one-to-three-year strategic planning document that contains the following components:

- Introduction Provides the context necessary to understand what the SCIP is and how it
  was developed. It also provides an overview of the current emergency communications
  landscape.
- **Vision and Mission** Articulates Washington's vision and mission for improving emergency and public safety communications interoperability over the next one-to-three-years.
- Governance Describes the current governance mechanisms for communications interoperability within Washington as well as successes, challenges, and priorities for improving it. The SCIP is a guiding document and does not create any authority or direction over any state or local systems or agencies.
- **Technology and Cybersecurity** Outlines public safety technology and operations needed to maintain and enhance interoperability across the emergency communications ecosystem.
- Funding Describes the funding sources and allocations that support interoperable communications capabilities within Washington along with methods and strategies for funding sustainment and enhancement to meet long-term goals.
- Implementation Plan Describes Washington's plan to implement, maintain, and update the SCIP to enable continued evolution of and progress toward the state's interoperability goals.

The Emergency Communications Ecosystem consists of many inter-related components and functions, including communications for incident response operations, notifications and alerts and warnings, requests for assistance and reporting, and public information exchange. The primary functions are depicted in the 2019 National Emergency Communications Plan.<sup>1</sup>

The Interoperability Continuum, developed by the Department of Homeland Security's SAFECOM program and shown in Figure 1, serves as a framework to address challenges and continue improving operable/interoperable and public safety communications.<sup>2</sup> It is designed to assist public safety agencies and policy makers with planning and implementing interoperability solutions for communications across technologies.

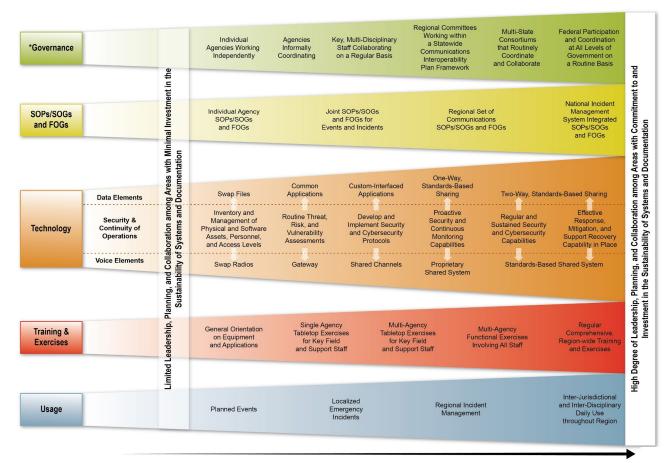

Figure 1: Interoperability Continuum

#### Interoperability and Emergency Communications Overview

Interoperability is the ability of emergency response providers and relevant government officials to communicate across jurisdictions, disciplines, and levels of government as needed and as authorized. Reliable, timely communications among public safety responders and between public safety agencies and citizens is critical to effectively carry out public safety missions, and in many cases, saving lives.

<sup>&</sup>lt;sup>1</sup> 2019 National Emergency Communications Plan

<sup>&</sup>lt;sup>2</sup> Interoperability Continuum Brochure

Traditional voice capabilities, such as land mobile radio (LMR) and landline 911 services have long been and continue to be critical tools for communications. However, the advancement of internet protocol-based technologies in public safety has increased the type and amount of information responders receive, the tools they communicate with, and complexity of new and interdependent systems. Emerging technologies increase the need for coordination across public safety disciplines, communications functions, and levels of government to ensure emergency communications capabilities are interoperable, reliable, and secure.

An example of this evolution is the transition of public-safety answering points (PSAPs) to Next Generation 911 (NG911) technology that will enhance sharing of critical information in real-time using multimedia—such as pictures, video, and text — among community members, public safety telecommunicators, dispatch, and field responders. While potential benefits of NG911 are tremendous, implementation challenges remain. Necessary tasks to fully realize these benefits include interfacing disparate systems, developing training and standard operating procedures (SOPs) and ensuring information security.

#### **VISION AND MISSION**

This section describes Washington's vision and mission for improving emergency and public safety communications interoperability:

#### **Vision:**

Seamless interoperable and resilient communications ecosystem

#### **Mission:**

Enable a statewide interoperable public safety communications strategy

#### **GOVERNANCE**

The interoperable emergency communications governing body for Washington State is the State Interoperability Executive Committee (SIEC) established under RCW 38.52.595. Administration of the SIEC falls under the Washington Military Department. Generic composition of the SIEC is set in statute. Additionally, SIEC authority is limited for locals, as the SIEC is mostly focused on state government.

The Washington Statewide Interoperability Coordinator (SWIC) currently serves as the Chair of the SIEC Staff Advisory Working Group (SAW). The SAW is the currently the only working group of the SIEC.

Top priorities for Washington include bolstering subcommittee efforts and increasing SIEC participation. The SIEC is focused on enhancing member engagement beyond regular meetings and reinforcing its role and value through targeted outreach and proactive information sharing.

The following table outlines goals and objectives related to Governance:

	Governance
Goal	Objectives
Enhance and expand interoperable communication governance throughout the state	
State	information and encourage active participation across the state
	1.3 Identify and establish subcommittees and subcommittee structure to add to the SIEC (ex. cybersecurity)
	1.4 Identify grant opportunities and communicate opportunities to stakeholders
	1.5 Create a full-time, fully funded SWIC position through identification of roles and responsibilities, sustainable funding stream, and administration staff support.
	1.6 Formalize communication and coordination between the state broadband office and the SIEC
	1.7 Identify the SIEC's role in alerts and warnings across the state
Increase inter/intra state communications coordinate planning	=
	2.2 Establish methods of interoperability with said partners
	2.3 Hold joint meetings with SIECs of adjoining states and provinces
	2.4 Establish a statewide interoperable LMR channel plan

#### **TECHNOLOGY AND CYBERSECURITY**

#### **Land Mobile Radio**

The Washington State Department of Transportation (WSDOT) operates and maintains a statewide Project 25 (P25) Phase 2 LMR system, as well as some microwave and 374 rural intelligent transportation systems (ITS). The LMR system is geographically redundant consisting of 136 communications sites, 18 consoles distributed in 6 traffic management centers, with over 4,000 mobile and portable radios. The WSDOT system supports a statewide Phase 2 interoperable talk group for state agency communications to the State Emergency Operations Center and Continuity of Operations (COOP) planning. This group is called the State Agency Emergency Network (STAEN). In addition, the WSDOT LMR project installed 39 interoperable repeaters throughout the state operating on National Interoperability Field Operations Guide (NIFOG) Phase 1 channels of 7TAC71, 7TAC72 or 7TAC75.

The Electronic Services Division (ESD) of the Washington State Patrol (WSP) operates and maintains the agency's statewide LMR, microwave, data, and voice (telephone) networks. ESD supports over 2,500 mobile and portable radios, 45 communications consoles at 7 communications centers, network connectivity to 63 offices and 2 data centers, and maintains over 120 communication sites statewide. From 2021-2023, \$7,962,000 from the State Patrol Highway

Account was utilized to replace and upgrade the LMR system. This covers four separate areas including LMR System update, communications infrastructure, LMR System Strategic Plan, and LMR Standard Radio Replacement.

Outside of the WSP system, Washington operates a variety of mission critical voice and data communications systems that are managed by various agencies based on their business needs. These disparate systems operate in multiple frequency bands to include Very High Frequency (VHF), Ultra High Frequency (UHF), 7/800 Megahertz (MHz), and data systems.

Seamless LMR interoperability across the state has been identified as an important goal for Washington. To do this, LTE will need to be integrated within the emergency radio ecosystem. This will allow for increased interoperability and mutual aid and support throughout the state.

#### 911/Next Generation 911

The Washington State 911 Coordination Office (SECO), which operates under the Emergency Management Division of the Washington Military Department, is overseen by the State 911 Coordinator. Washington State's 911 Program works to ensure the statewide 911 communication system operates effectively and can support Washington's 911 programs. Additionally, the SECO and the 911 Advisory Committee offer a 911 Telecommunicator Training Program.

All 39 counties accept text to 911. Washington has 78 Public Safety Answering Points (PSAPs) which cover all 39 counties of the state. Each PSAP is connected to the State 911 network.

An overarching goal for 911/NG911 in Washington is to create interoperability between communications and emergency radio systems. This can be done through full implementation of industry-neutral standards to support implementing NG9-1-1 and IP based emergency communications system.

The Statewide Interoperability Executive Committee (SIEC) strongly advocates for the immediate statewide adoption of the STA-021 Emergency Incident Data Object (EIDO) and STA-024 Conveyance of EIDOs between NG9-1-1 Systems and Applications standards. These standards are not just recommended—they are essential for the seamless exchange of emergency incident information between disparate systems across various agencies and stakeholders. Failure to adopt these standards risks leaving our emergency response infrastructure fragmented and inefficient, potentially compromising the safety and well-being of our communities. By integrating STA-021 and STA-024, we can ensure that our emergency communication systems are fully interoperable, enabling a faster, more coordinated response to incidents statewide.

#### **Broadband**

Washington has developed Washington OneNet in an effort to work with FirstNet to design and develop a plan unique to Washington's public safety broadband needs. In addition, WSP is reaching out to partnering states to capture best lessons learned (examining equipment, processes, challenges and implementation) as well as looking at the utilization of mega range and utilizing net motion to capture coverage through FirstNet.

In order to continue the expansion of Washington's public safety broadband, the state should explore future capabilities of broadband providers and create a statewide coverage map to identify gaps in the coverage.

#### **Alerts and Warnings**

In Washington State, the Emergency Alert System (EAS) is housed under the Emergency Management Division. Washington has a State EAS Plan including both county and statewide alerts. Public alerting on earthquakes in the state is called ShakeAlert and is available via Wireless Emergency Alerts (WEA) and cell phones.

#### **Cybersecurity**

In 2011, the Legislature created Washington Technology Solutions (WaTech), the government agency legally known as "the consolidated technology services agency" (CTS), to provide state agencies with a centralized provider and procurer of information technology services. WaTech operates the state's core technology services - the central network and data center – and provides strategic and comprehensive information security to protect state networks from growing cyber threats. WaTech serves state agencies, county, city and tribal governments, and public-benefit nonprofits.

Additionally, there is a Cybersecurity Program created within the Emergency Management Division of the Washington State Military Department. The primary goals of the program are to incorporate cybersecurity into statewide emergency planning, training, preparation, and response procedures. WaTech is currently building a risk profile of the National Institute of Standards and Technology (NIST) cybersecurity framework. This will be a standardized risk profile and will include information sharing at any level.

Technology and cybersecurity goals and objectives include the following:

	Technology and Cybersecurity
Goal	Objectives
Increase LMR interoperability statewide	3.1 Add LMR technology and usage standards to the communications plan
	3.2 Consult with the state attorney general about potential mandates for local agencies regarding P25 standards
	3.3 Ensure CASM remains updated with interoperable channel information
	3.4 Identify LMR interoperability capabilities across the State, compliance with the Revised Code of Washington, determine interoperability gaps, and identify interoperability solutions
	3.5 Work with LTE and third-party providers and identify opportunities for LTE/LMR integration
	3.6 Review and recommend updates of the Revised Code of Washington and grant guidance to ensure compliance with LMR standards
	3.7 Identify opportunities to increase interoperability between the statewide ESInet and other statewide networks
Continue to improve the cybersecurity posture of	4.1 Increase information sharing between the Office of Cybersecurity and the SIEC
interoperable systems	4.2 Provide templates and communicate best practices for cyber security
	4.3 Add the state Chief Information Security Officer (CISO) to the SIEC

#### **FUNDING**

Washington is looking to gain a better understanding of what interoperable systems are in the state. The SIEC will sponsor an interoperability assessment to show where there are gaps in the system, and create a map based on this assessment. This will allow for a better understanding of which areas are lacking in funding and would be eligible for grants to enhance interoperability.

Through increasing the efficiency and effectiveness of the SIEC, funding and grant opportunities will become more accessible throughout the state.

#### **TRIBAL**

The State of Washington has 29 federally recognized Tribes, along with 5 non-federally recognized Tribes. A 2019 SCIP goal established a Tribal representative as a formal member of the SIEC. Cowlitz Tribe member Dan Meyer, also representing the Affiliated Tribes of Northwest Indians (ANTI), was appointed to that seat. Many (but not all) Tribes in the State are participants in the ATNI, which develops and pursues regional strategies for the development, protection and advancement of the interests of member Tribes and their people in the areas represented by ATNI committees which include cultural affairs, economic development, human and social services, natural resources and environment, Tribal governance, and ad hoc task forces.

The Governor's Office of Indian Affairs serve as liaison between state and tribal governments in an advisory, resource, consultation, and educational capacity. Leaders from 25 Washington tribes met with Commissioner of Public Lands to discuss common concerns and initiatives at the Department of Natural Resources' 2014 Tribal Summit. The National Tribal Emergency Management Council held the first ever national-level exercises fully planned and executive by Tribal Nations (Thunderbird and Whale).

In developing this document, the acting SWIC specifically requested a tribal-focused webinar completed on October 12, 2022.

#### **IMPLEMENTATION PLAN**

Each goal and its associated objectives have a timeline with a target completion date, and one or multiple owners who will be responsible for overseeing and coordinating its completion. Accomplishing goals and objectives will require the support and cooperation from numerous individuals, groups, or agencies, and will be added as formal agenda items for review during regular governance body meetings. The Cybersecurity and Infrastructure Security Agency's (CISA) Interoperable Communications Technical Assistance Program (ICTAP) has a catalog<sup>3</sup> of technical assistance (TA) available to assist with the implementation of the SCIP. TA requests are to be coordinated through the SWIC.

Washington's implementation plan is shown in the table below.

Goals	Objectives	Owners	Completion Date
Enhance and expand Interoperab Communications governance throughout the state	e 1.1 Research and implement opportunities for regional and/or discipline representation (e.g., SIEC work groups including regional working groups)		'Ongoing'
	1.2 Develop and execute a communications plan to provide information and encourage active participation across the state		July 2025
	1.3 Identify and establish subcommittees and subcommittee structure to add to the SIEC (ex. cybersecurity)	SIEC	March 2025
	1.4 <b>Identify grant opportunities</b> and communicate opportunities to stakeholders		Ongoing
	1.5 Create a full-time, fully funded SWIC position through identification of roles and responsibilities, sustainable funding stream, and administration staff support.		July 2023 - Complete
	1.6 Formalize communication and coordination between the state broadband office and the SIEC		July 2025
Increase inter/intra state communications coordination planning	2.1 Establish regular lines of communications with international partners, neighboring states, tribal nations, and federal agencies	014/10	Ongoing
	2.2 Hold joint meetings with SIECs of adjoining states and provinces	SWIC	Ongoing
	2.3 Establish a statewide interoperable LMR channel plan		July 2025
3. Increase LMR interoperability statewide	3.1 Add LMR technology and usage standards to communications plan – Communication plan has not been developed.	SIEC	TBD

<sup>&</sup>lt;sup>3</sup> Emergency Communications Technical Assistance Planning Guide

Goals	Objectives	Owners	Completion Date
	3.2 Ensure <b>CASM remains updated</b> with interoperable channel information	SWIC	Ongoing
	3.3 Identify LMR interoperability capabilities across the State, compliance with the Revised Code of Washington, determine interoperability gaps, and identify interoperability solutions	SIEC	Ongoing
	3.4 Work with LTE and third-party providers and identify opportunities for LTE/LMR integration	SIEC	Ongoing
	3.5 Review and recommend updates of the Revised Code of Washington and grant guidance to ensure compliance with LMR standards	SWIC	June 2024
	3.6 Identify opportunities to increase interoperability between the statewide ESInet and other statewide networks	SECO	Ongoing
Continue to improve the cybersecurity posture of interoperable systems	4.1 responsibility. This falls under the MIL critical infrastructure realm. Increase information sharing between the SIEC and key cybersecurity (entities?) including but not limited to the Office of Cybersecurity, EMD Cybersecurity Section and etc.	EMD	Ongoing
	4.2 This needs to come from the MIL CISO Provide templates and communicate best practices for cybersecurity.	Cybersecurity Subcommittee	Ongoing
	4.3 This MIL CISO needs to be added. Add the state CISO to the SIEC.	SIEC	February 2023 - Complete

#### **APPENDIX A: STATE MARKERS**

In 2019, CISA supported States and Territories in establishing an initial picture of interoperability nationwide by measuring progress against 25 markers. These markers describe a State or Territory's level of interoperability maturity. Below is Washington's assessment of their progress against the markers as of May 2023.

Marker	Best Practices / Performance Markers	Initial	Defined	Optimized
1	State-level governing body established (e.g., SIEC, SIGB). Governance framework is in place to sustain all emergency communications	Governing body does not exist, or exists and role has not been formalized by legislative or executive actions	Governing body role established through an executive order	Governing body role established through a state law
2	SIGB/SIEC participation. Statewide governance body is comprised of members who represent all components of the emergency communications ecosystem.	Initial (1-2) Governance body participation includes:  Communications Champion/SWIC  LMR Broadband/LTE 911 Alerts, Warnings and Notifications	Defined (3-4) Governance body participation includes:  Communications Champion/SWIC LMR Broadband/LTE 911 Alerts, Warnings and Notifications	Optimized (5) Governance body participation includes:  ☑ Communications Champion/SWIC ☑ LMR ☑ Broadband/LTE ☑ 911 ☑ Alerts, Warnings and Notifications
3	<b>SWIC established.</b> Full-time SWIC is in place to promote broad and sustained participation in emergency communications.	SWIC does not exist	Full-time SWIC with collateral duties	Full-time SWIC established through executive order or state law
4	<b>SWIC Duty Percentage.</b> SWIC spends 100% of time on SWIC-focused job duties	SWIC spends >1, <50% of time on SWIC-focused job duties	SWIC spends >50, <90% of time on SWIC-focused job duties	SWIC spends >90% of time on SWIC-focused job duties
5	SCIP refresh. SCIP is a living document that continues to be executed in a timely manner. Updated SCIPs are reviewed and approved by SIGB/SIEC.	No SCIP OR SCIP older than 3 years	SCIP updated within last 2 years	SCIP updated in last 2 years and progress made on >50% of goals
6	SCIP strategic goal percentage. SCIP goals are primarily strategic to improve long term emergency communications ecosystem (LMR, LTE, 911, A&W) and future technology transitions (5G, IoT, UAS, etc.). (Strategic and non-strategic goals are completely different; strategy path from here to the destination; it is unlike tactics which you can "touch"; cannot "touch" strategy)	<50% are strategic goals in SCIP	>50%<90% are strategic goals in SCIP	>90% are strategic goals in SCIP

Marker	Best Practices / Performance Markers	Initial	Defined	Optimized
7	Integrated emergency communication grant coordination. Designed to ensure state / territory is tracking and optimizing grant proposals, and there is strategic visibility how grant money is being spent.	No explicit approach or only informal emergency communications grant coordination between localities, agencies, SAA and/or the SWIC within a state / territory	SWIC and/or SIGB provides guidance to agencies and localities for emergency communications grant funding but does not review proposals or make recommendations	SWIC and/or SIGB provides guidance to agencies and localities for emergency communications grant funding and reviews grant proposals for alignment with the SCIP. SWIC and/or SIGB provides recommendations to the SAA
8	Communications Unit process. Communications Unit process present in state / territory to facilitate emergency communications capabilities. Check the boxes of which Communications positions are currently covered within your process:  ☑ COML ☑ COMT ☑ ITSL ☑ RADO ☑ INCM ☑ INTD ☑ AUXCOM ☑ TERT	No Communications Unit process at present	Communications Unit process planned or designed (but not implemented)	Communications Unit process implemented and active
9	Interagency communication. Established and applied interagency communications policies, procedures and guidelines.	Some interoperable communications SOPs/SOGs exist within the area and steps have been taken to institute these interoperability procedures among some agencies	Interoperable communications SOPs/SOGs are formalized and in use by agencies within the area. Despite minor issues, SOPs/SOGs are successfully used during responses and/or exercises	Interoperable communications SOPs/SOGs within the area are formalized and regularly reviewed. Additionally, NIMS procedures are well established among agencies and disciplines. All needed procedures are effectively utilized during responses and/or exercises.
10	TICP (or equivalent) developed. Tactical Interoperable Communications Plans (TICPs) established and periodically updated to include all public safety communications systems available	Regional or statewide TICP in place	Statewide or Regional TICP(s) updated within past 2-5 years	Statewide or Regional TICP(s) updated within past 2 years
11	Field Operations Guides (FOGs) developed. FOGs established for a state or territory and periodically updated to include all public safety communications systems available	Regional or statewide FOG in place	Statewide or Regional FOG(s) updated within past 2-5 years	Statewide or Regional FOG(s) updated within past 2 years

Marker	Best Practices / Performance Markers	Initial	Defined	Optimized
12	Alerts & Warnings. State or Territory has Implemented an effective A&W program to include Policy, Procedures and Protocol measured through the following characteristics:  (1) Effective documentation process to inform and control message origination and distribution  (2) Coordination of alerting plans and procedures with neighboring jurisdictions  (3) Operators and alert originators receive periodic training  (4) Message origination, distribution, and correction procedures in place	<49% of originating authorities have all of the four A&W characteristics	>50%<74% of originating authorities have all of the four A&W characteristics	>75%<100% of originating authorities have all of the four A&W characteristics
13	Radio programming. Radios programmed for National/Federal, SLTT interoperability channels and channel nomenclature consistency across a state / territory.	<49% of radios are programed for interoperability and consistency	>50%<74% of radios are programed for interoperability and consistency	>75%<100% of radios are programed for interoperability and consistency
14	Cybersecurity Assessment Awareness. Cybersecurity assessment awareness. (Public safety communications networks are defined as covering: LMR, LTE, 911, and A&W)	Public safety communications network owners are aware of cybersecurity assessment availability and value (check yes or no for each option)  LMR  LTE  911/CAD  A&W	Initial plus, conducted assessment, conducted risk assessment. (Check yes or no for each option)  ☑ LMR ☑ LTE ☑ 911/CAD ☑ A&W	Defined plus, Availability of Cyber Incident Response Plan (check yes or no for each option)  ☐ LMR ☐ LTE ☐ 911/CAD ☐ A&W
15	NG911 implementation. NG911 implementation underway to serve state / territory population.	Working to establish NG911 governance through state/territorial plan.  Developing GIS to be able to support NG911 call routing. Planning or implementing ESInet and Next Generation Core Services (NGCS). Planning to or have updated PSAP equipment to handle basic NG911 service offerings.	More than 75% of PSAPs and Population Served have:  NG911 governance established through state/territorial plan. GIS developed and able to support NG911 call routing. Planning or implementing ESInet and Next Generation Core Services (NGCS). PSAP equipment updated to handle basic NG911 service offerings.	More than 90% of PSAPs and Population Served have:  NG911 governance established through state/territorial plan. GIS developed and supporting NG911 call routing. Operational Emergency Services IP Network (ESInet)/Next Generation Core Services (NGCS).

Marker	Best Practices / Performance Markers	Initial	Defined	Optimized
				PSAP equipment updated and handling basic NG911 service offerings.
16	Data operability / interoperability. Ability of agencies within a region to exchange data on demand, and needed, and as authorized. Examples of systems would be: - CAD to CAD - Chat - GIS - Critical Incident Management Tool (- Web EOC)	Agencies are able to share data only by email. Systems are not touching or talking.	Systems are able to touch but with limited capabilities. One-way information sharing.	Full system to system integration. Able to fully consume and manipulate data.
17	Future Technology/Organizational Learning. SIEC/SIGB is tracking, evaluating, implementing future technology (checklist)	<ul> <li>☑ LMR to LTE Integration</li> <li>☑ 5G</li> <li>☑ IoT (cameras)</li> <li>☑ UAV (Smart Vehicles)</li> <li>☑ UAS (Drones)</li> <li>☑ Body Cameras</li> <li>☑ Public Alerting Software</li> <li>☑ Sensors</li> <li>☑ Autonomous Vehicles</li> <li>☑ MCPTT Apps</li> </ul>	<ul> <li>□ Wearables</li> <li>⋈ Machine Learning/Artificial</li> <li>Intelligence/Analytics</li> <li>⋈ Geolocation</li> <li>⋈ GIS</li> <li>⋈ Situational Awareness Appscommon operating picture applications (i.e., Force Tracking, Chat Applications, Common Operations Applications)</li> </ul>	<ul> <li>☑ HetNets/Mesh</li> <li>Networks/Software Defined</li> <li>Networks</li> <li>☑ Acoustic Signaling (Shot Spotter)</li> <li>☑ ESInet</li> <li>☐ 'The Next Narrowbanding'</li> <li>☑ Smart Cities</li> </ul>
18	Communications Exercise objectives. Specific emergency communications objectives are incorporated into applicable exercises Federal / state / territory-wide	Regular engagement with State Training and Exercise coordinators	Promote addition of emergency communications objectives in state/county/regional level exercises (target Emergency Management community). Including providing tools, templates, etc.	Initial and Defined plus mechanism in place to incorporate and measure communications objectives into state/county/regional level exercises
19	Trained Communications Unit responders. Communications Unit personnel are listed in a tracking database (e.g., NQS One Responder, CASM, etc.) and available for assignment/response.	<49% of public safety agencies within a state / territory have access to Communications Unit personnel who are listed in a tracking database and available for assignment/response	>50%<74% of public safety agencies within a state / territory have access to Communications Unit personnel who are listed in a tracking database and available for assignment/response	>75%<100% of public safety agencies within a state / territory have access to Communications Unit personnel who are listed in a tracking database and available for assignment/response
20	Communications Usage Best Practices/Lessons Learned. Capability exists within jurisdiction to share best practices/lessons learned (positive and/or	Best practices/lessons learned intake mechanism established. Create Communications AAR template to collect best practices	Initial plus review mechanism established	Defined plus distribution mechanism established

Marker	Best Practices / Performance Markers	Initial	Defined	Optimized
	negative) across all lanes of the Interoperability Continuum related to all components of the emergency communications ecosystem			
21	Wireless Priority Service (WPS) subscription. WPS penetration across state / territory compared to maximum potential	<9% subscription rate of potentially eligible participants who signed up WPS across a state / territory	>10%<49% subscription rate of potentially eligible participants who signed up for WPS a state / territory	>50%<100% subscription rate of potentially eligible participants who signed up for WPS across a state / territory
22	Outreach. Outreach mechanisms in place to share information across state	SWIC electronic communication (e.g., SWIC email, newsletter, social media, etc.) distributed to relevant stakeholders on regular basis	Initial plus web presence containing information about emergency communications interoperability, SCIP, trainings, etc.	Defined plus in-person/webinar conference/meeting attendance strategy and resources to execute
23	Sustainment assessment. Identify interoperable component system sustainment needs; (e.g., communications infrastructure, equipment, programs, management) that need sustainment funding. (Component systems are emergency communications elements that are necessary to enable communications, whether owned or leased - state systems only)	< 49% of component systems assessed to identify sustainment needs	>50%<74% of component systems assessed to identify sustainment needs	>75%<100% of component systems assessed to identify sustainment needs
24	Risk identification. Identify risks for emergency communications components. (Component systems are emergency communications elements that are necessary to enable communications, whether owned or leased. Risk Identification and planning is in line with having a communications COOP Plan)	< 49% of component systems have risks assessed through a standard template for all technology components	>50%<74% of component systems have risks assessed through a standard template for all technology components	>75%<100% of component systems have risks assessed through a standard template for all technology components
25	Cross Border / Interstate (State to State) Emergency Communications. Established capabilities to enable emergency communications across all components of the ecosystem.	Initial: Little to no established:  ☐ Governance ☐ SOPs/MOUs ☐ Technology ☐ Training/Exercises ☑ Usage	Defined: Documented/established across some lanes of the Continuum: ☐ Governance ☐ SOPs/MOUs ☐ Technology ☐ Training/Exercises ☐ Usage	Optimized: Documented/established across all lanes of the Continuum: Governance SOPs/MOUs Technology Training/Exercises Usage

### **APPENDIX B: ACRONYMS**

Acronym	Definition
AAR	After-Action Report
ATNI	Affiliated Tribes of Northwest Indians
AUXCOMM/AUXC	Auxiliary Emergency Communications
A&W	Alerts and Warnings
CASM	Communication Assets Survey and Mapping
CISA	Cybersecurity and Infrastructure Security Agency
COML	Communications Unit Leader
COMT	Communications Unit Technician
COMU	Communications Unit Program
COOP	Continuity of Operations Plan
CTS	Consolidated Tech Services
DHS	Department of Homeland Security
EAS	Emergency Alert System
ESD	Electronic Services Division
ESInet	Emergency Services Internal Protocol Network
FOG	Field Operations Guide
GIS	Geospatial Information System
ICTAP	Interoperable Communications Technical Assistance Program
INCM	Incident Communications Center Manager
INTD	Incident Tactical Dispatcher
IP	Internet Protocol
ITSL	Information Technology Service Unit Leader
LMR	Land Mobile Radio
MHz	Megahertz
MOU	Memorandum of Understanding
NCSWIC	National Council of SWICs
NECP	National Emergency Communications Plan
NG911	Next Generation 911
PSAP	Public Safety Answering Point
RADO	Radio Operator
SAW	Staff Advisory Working Group
SCIP	Statewide Communication Interoperability Plan
SECO	Statewide 911 Coordination Office
SIEC	Statewide Interoperability Executive Committee
SOP	Standard Operating Procedure
SPOC	Single Point of Contact

Acronym	Definition	
SWIC	Statewide Interoperability Coordinator	
TA	Technical Assistance	
TERT	Telecommunications Emergency Response Team	
TICP	Tactical Interoperable Communications Plan	
UHF	Ultra-High Frequency	
VHF	Very High Frequency	
WaTech	Washington Technology Solutions	
WPS	Wireless Priority Service	
WSP	Washington State Patrol
